

CL-X: New benchmark for pre-cleaning

- 1,600 kg/h production
- 30 % less energy consumption*
- >100 % improved cleaning efficiency*
- 2.60 m long cleaning section
- Two-step cleaning
- Synchronized lot management
- WASTECONTROL sensor

* compared to current benchmark

Fiber-friendly cleaning: Pre-Cleaner CL-X

Pre-Cleaner CL-X

Pre-Cleaner CL-X

Gentle fiber cleaning at high production and minimal energy consumption:

The CL-X Pre-Cleaner is the first choice when it comes to gentle removal of coarse impurities from cotton.

Despite high productivity, the CL-X is energy-efficient and gentle on fibers.

The standard WASTECONTROL system ensures maximum raw material utilization and minimum good fiber loss. The lot management system enables direct, automated coordination with the Bale Opener BO-P.

Fine Cleaner CL-C3

The fine cleaner for heavily contaminated cotton:

The CL-C3 is a stand-alone cleaner designed for severely contaminated cottons in short, compact lines. In combination with the Pre-Cleaner CL-X, it can be used for almost all cottons – a flexibility that provides the spinning mill with investment protection and future reliability.
