

Automatic Register Control System for Rotogravure Printing Machines

To ensure that a rotogravure print of a multi-coloured image is clear and sharp, it is necessary to ensure that each colour is printed in exactly the right location with respect to the previously printed colours. If this is not done, we say the printing is 'out of register', or that there's a registration error. Such prints have a fuzzy or blurred appearance.

Out of register

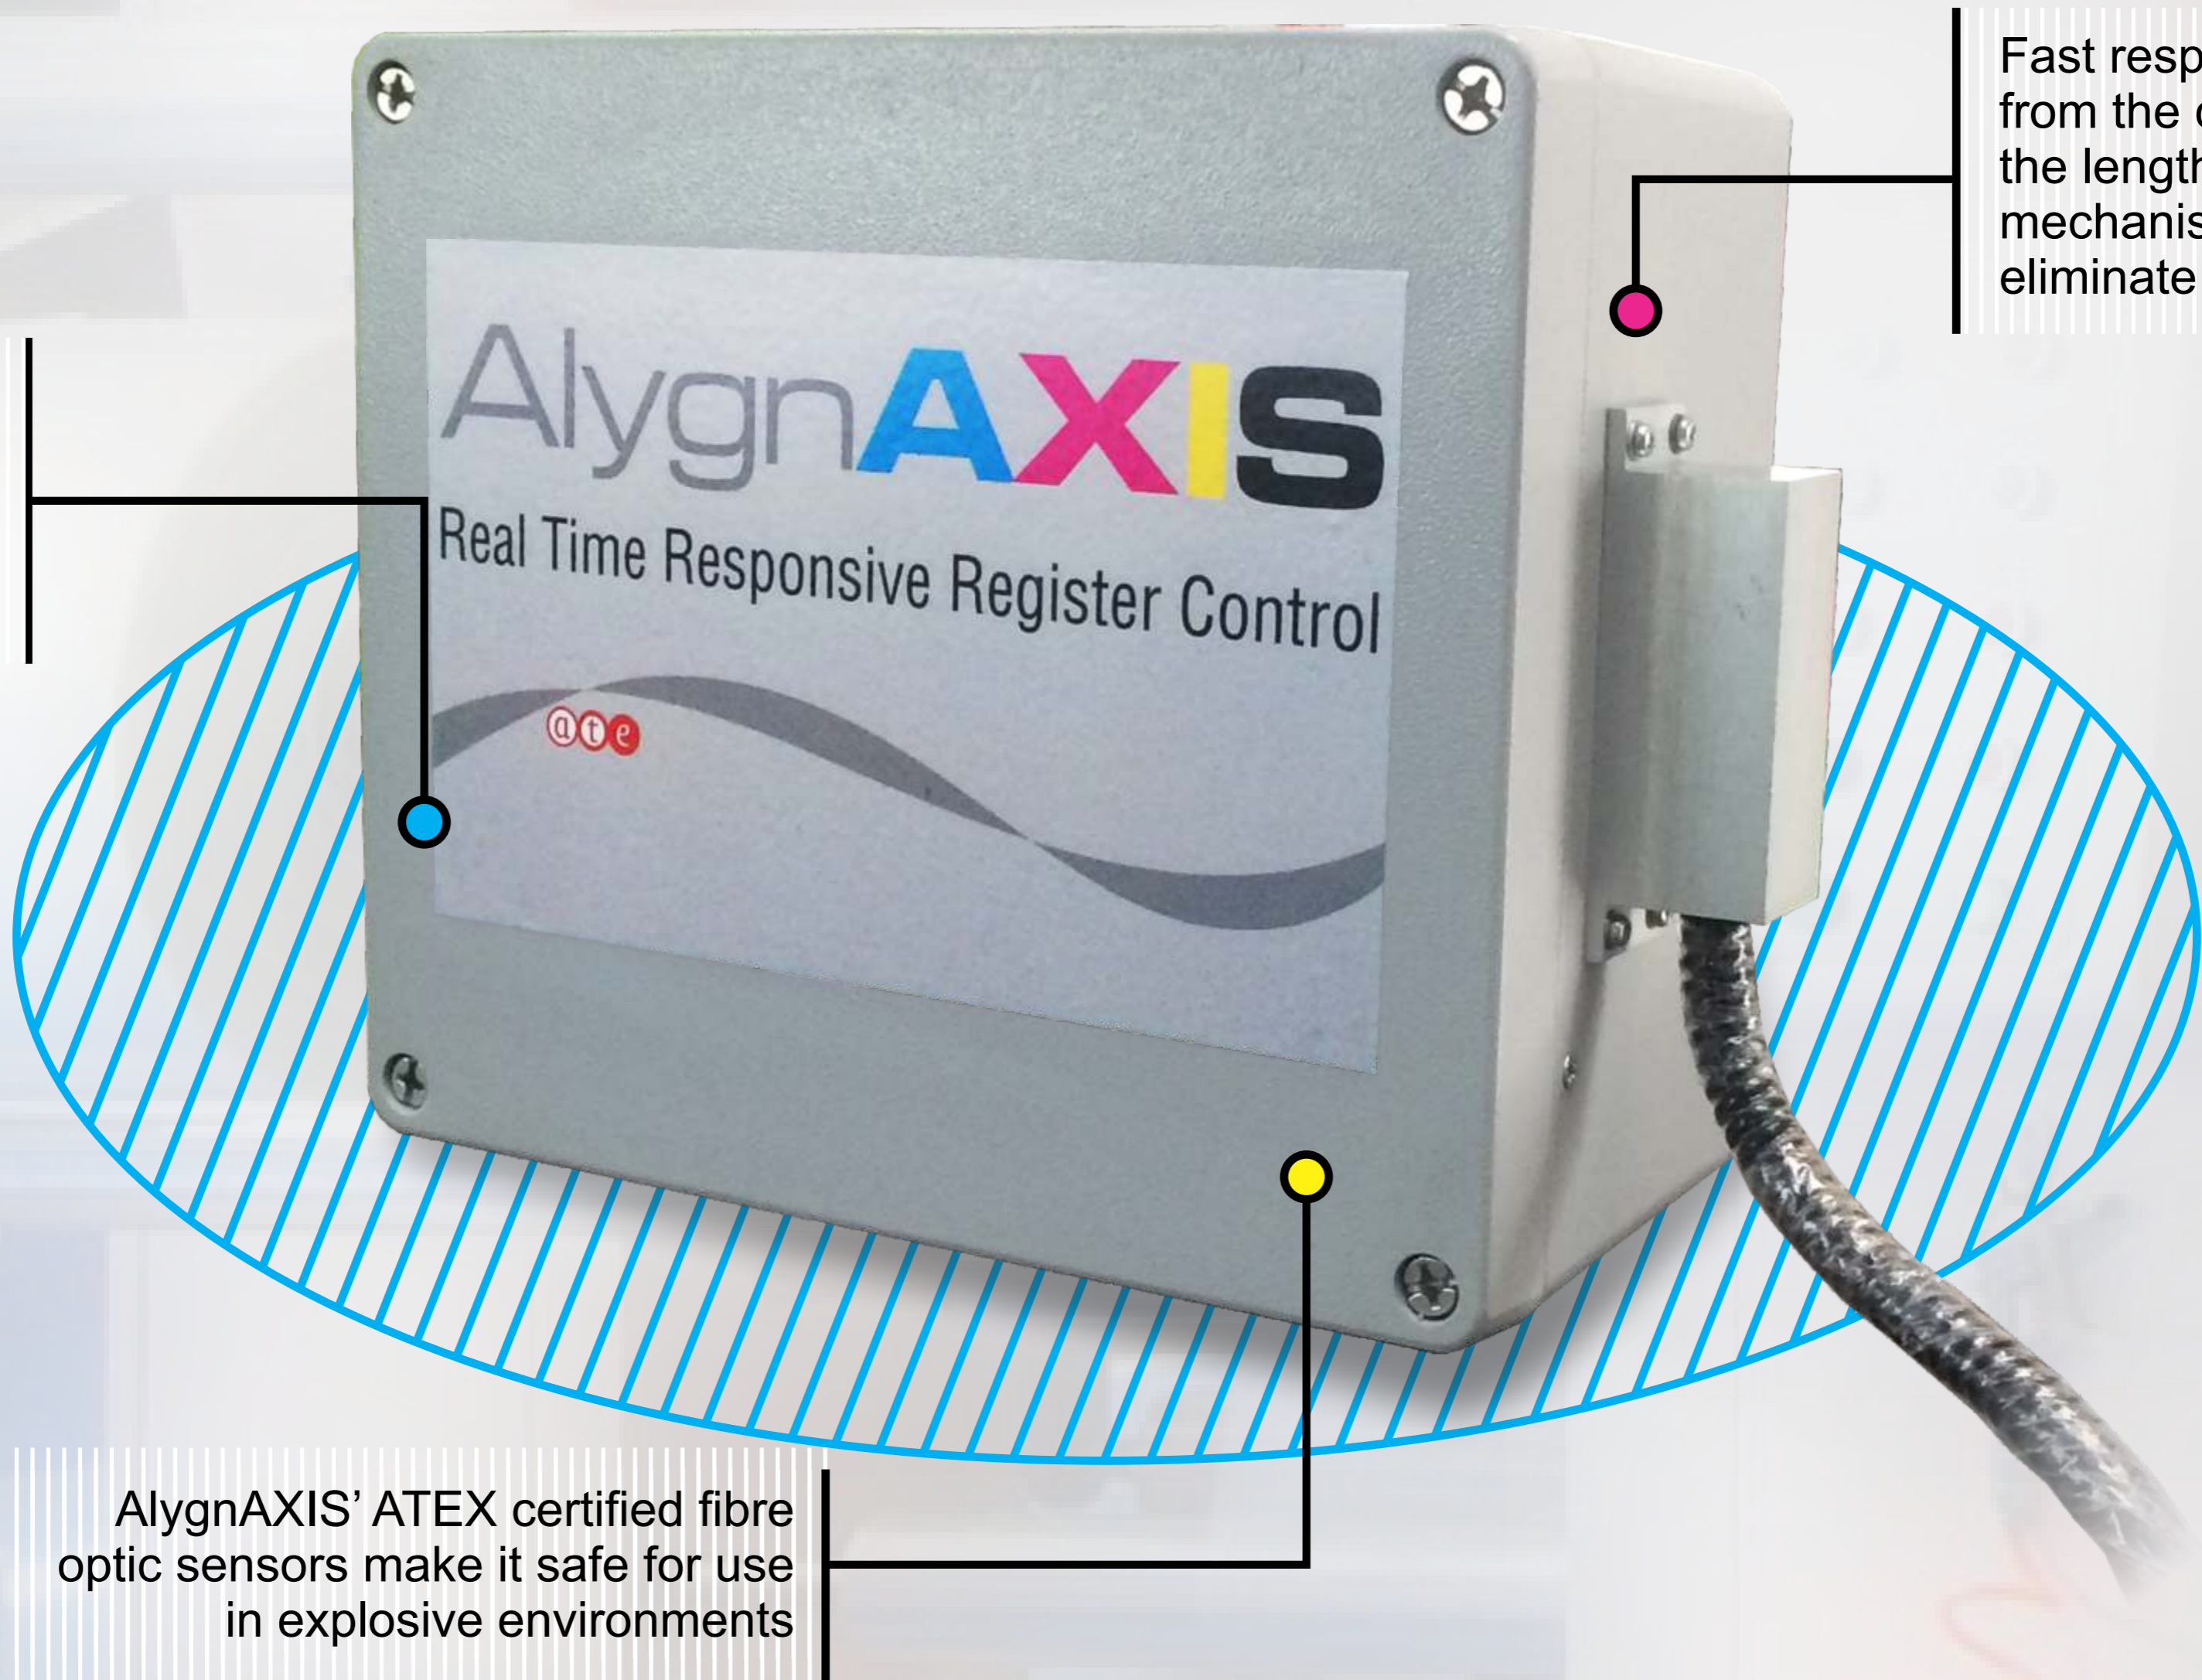

Perfect registration

▣ LOWER MATERIAL WASTAGE

▣ CONSISTENT PRINT QUALITY

▣ INCREASED PROFITABILITY

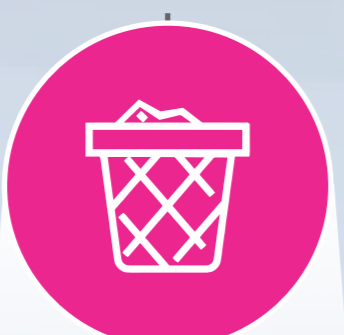

AlygnAXIS

BENEFITS

Boost profitability and productivity

Reduced material waste during start up, ramp up, and ramp down

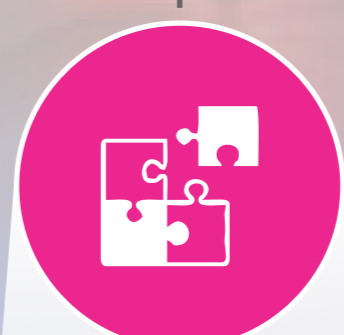

Consistent and superior product quality

Increased machine speed

Saving in labour & costs

Versatile and adaptive to specific job needs

Saves time for repeat jobs
